Overview

This document should provide a general idea of what our system does and should provide a step by step process of how users can install the software needed to successfully run our system on their end. This document also provides end users with visuals of how our interfaces work and interconnect with each other.

Objective

The main objective for this documentation is to increase usability through providing thorough installation and usage instructions.

About Belize Cattle Tracker

About: Belize Cattle Tracker is a cattle traceability system that offers for livestock agriculture to be revolutionized and for an easier alternative to keep track of cattle information for cattles that are used to produce industry level meat produce. Belize Cattle Tracker assists BAHA in making sure that quality control is maintained when producing meat products in Belize. Belize Cattle Tracker also aims to allow our customers with an insight of cattle information, so that they can make effective decisions when purchasing produce from meat production companies who collaborate with us (Running W).

Version: 1.0

Installation: For users(Farmers, Slaughterhouse Managers, Packaging Managers, Customers) no installation is needed. However, for the BAHA Admin users, since they will be managing the system, there will be required software for them to install.

System Requirements: Belize Cattle Tracker is a web based application that is adaptable to both desktop and mobile devices.

For our desktop users (ADMINS): A device (desktop, phone, tablet) that is able to connect to the internet.

Four our mobile users (Customers/ADMINS): A smart device that has a camera (rear view/back camera) with the ability to scan QR codes.

Using Belize Cattle Tracker

ADMIN SIDE

BAHA (Main Managers of System)

To run the system

Install Node.js

<https://www.youtube.com/watch?v=hJj2rj-nzuw&t=2s>

Install ReactJS

<https://www.youtube.com/watch?v=0twjvW0c1r0>

<https://www.youtube.com/watch?v=e1lQAIBJiHQ>

Install Visual Studio Code

<https://www.youtube.com/watch?v=MlIzFUI1QGA>

https://www.youtube.com/watch?v=JPZsB_6yHVo

Log Into shared Firebase account.

<https://www.youtube.com/watch?v=jCY6DH8F4oc&t=753s>

Credentials are:

Email: belizecattletracker@gmail.com

Password: BzCattle

To do testing

Install Jest

<https://www.youtube.com/watch?v=Fi8RiagOFaA>

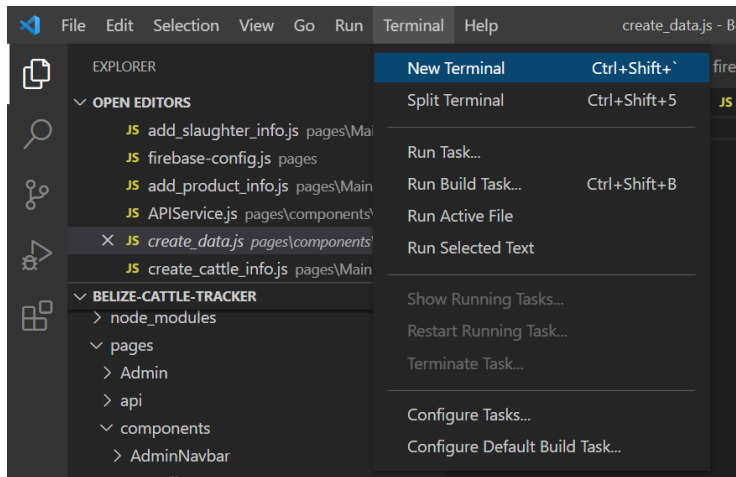

<https://jestjs.io/docs/tutorial-react>

Add the code below to the package.json file

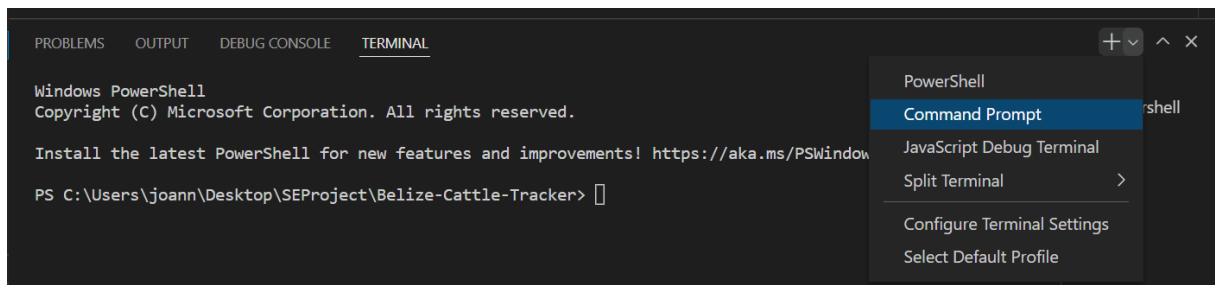

```
{
  "scripts": {
    "test": "jest"
  }
}
```

Running test on application:

1. Open a new terminal in Visual Studio Code.

2. Confirm that your terminal is in the command prompt and not the power shell.

3. Open the folder of the proper directory containing the code.

4. Verify that Jest was included in the package.json file.

```
"devDependencies": {  
  "eslint": "8.10.0",  
  "eslint-config-next": "12.1.0",  
  "jest": "^27.5.1"  
}
```

5. Type the following command into the opened terminal (for integration testing): npm run test

```
C:\Users\joann\Desktop\SEProject\Belize-Cattle-Tracker>npm run test
```

6. Type the following command into the opened terminal (for unit testing): yarn test -- -t 'name of the test case'

Example: yarn test -- -t 'TC-1 Add cattle info successfully to the database with valid data'

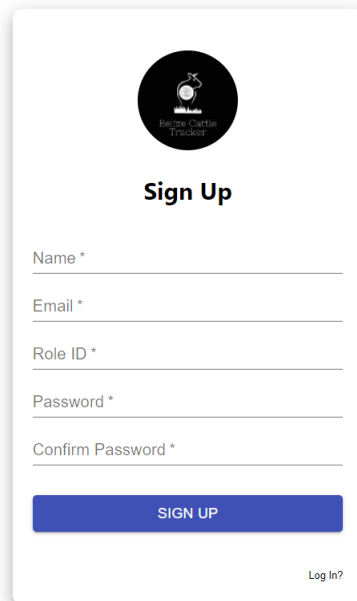

```
C:\Users\joann\Desktop\SEProject\Belize-Cattle-Tracker>yarn test -- -t 'TC-1 Add cattle info successfully to the database with valid data'
```

To use the system

1. Login with created credentials.
2. Access Belize Cattle Tracker ADMIN site.
3. Follow the steps stated below.

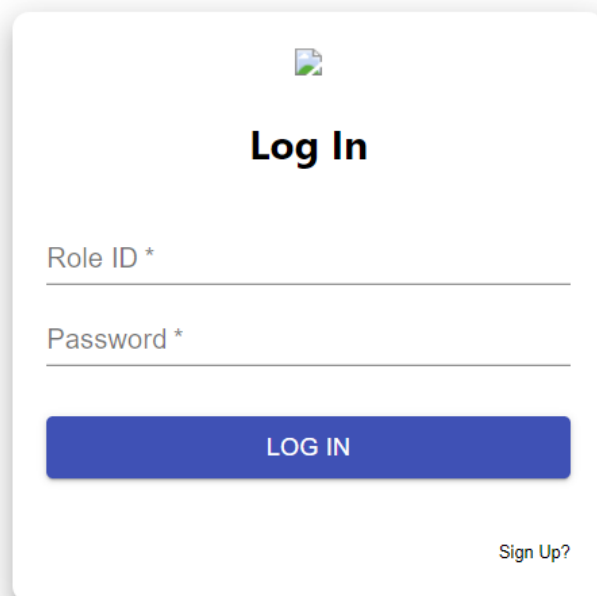

Other ADMIN Users of the System (BAHA, Baha Registered → Farmers, Slaughter House Managers, Packaging Managers)

1. Sign Up for an account using desired credentials and with assigned role codes from (BAHA/system auto generation).

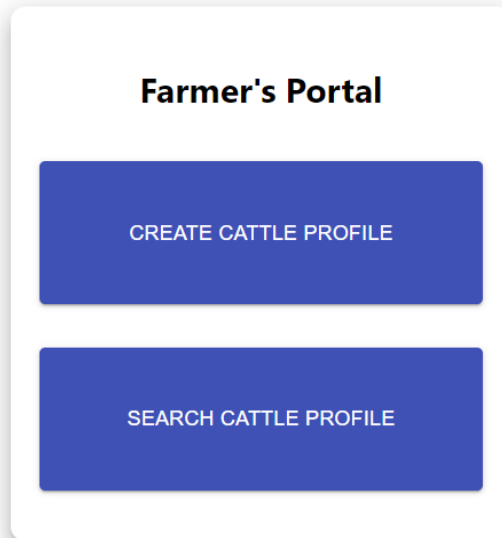

The Sign Up form features a circular logo at the top center with a stylized 'B' and the text 'Baha System Truckee' below it. The title 'Sign Up' is centered below the logo. The form contains five input fields: 'Name *', 'Email *', 'Role ID *', 'Password *', and 'Confirm Password *'. A blue 'SIGN UP' button is positioned below the fields. A 'Log In?' link is located at the bottom right corner of the form.

2. If you have already previously created an account with a BAHA assigned role code, Login.

The Log In form features a small landscape image at the top center. The title 'Log In' is centered below the image. The form contains two input fields: 'Role ID *' and 'Password *'. A blue 'LOG IN' button is positioned below the fields. A 'Sign Up?' link is located at the bottom right corner of the form.

3. Access your role portal. Example: A farmer accesses their farmer portal. Portals are all similar. All have a button to search for a cattle profile and add on information to the cattle profile.

The image shows a white rectangular box with a drop shadow, representing a 'Farmer's Portal'. At the top, the text 'Farmer's Portal' is centered in a bold, black font. Below this, there are two large, blue rectangular buttons stacked vertically. The top button contains the text 'CREATE CATTLE PROFILE' in white, uppercase letters. The bottom button contains the text 'SEARCH CATTLE PROFILE' in white, uppercase letters.

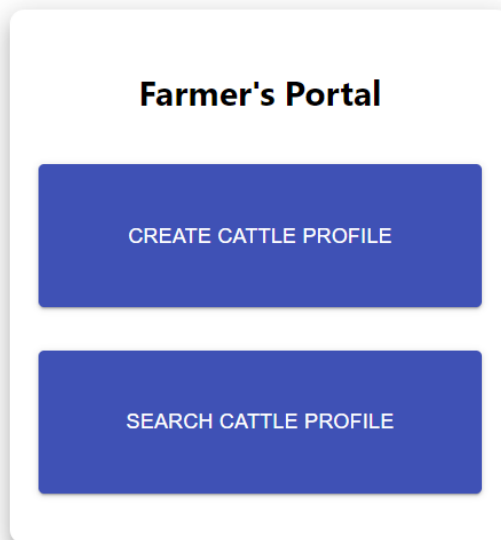

4. (eg: farmer) Selects the Create Cattle Profile button. (Slaughterhouse and Packaging Managers do not have this option → Skip to step 7).

The image shows a 'Create New Cattle Profile' form. It has a title 'Create New Cattle Profile' at the top. Below the title are several input fields, each with a label and an asterisk indicating it is required: 'Birth Date *', 'Gender *', 'Cattle ID *', 'Underlying Health Issues' (with a small icon for text expansion), 'Weight *', 'Location *', 'Breed *', 'Rearing Type *', 'Type of Antibiotics Used *', 'Reproduction Status *', and 'DNA Type *'. At the bottom of the form is a dropdown menu labeled 'Life Status'. Below the form are two buttons: a red 'CANCEL' button and a green 'ADD PROFILE' button.

5. Cancel clears all entered fields. Add profile adds the information to the database and the system autocreates a profile containing the data/updates the profile information.

6. To view an added cattle profile, or to add/update cattle information, the Search Cattle Profile Button can be selected.

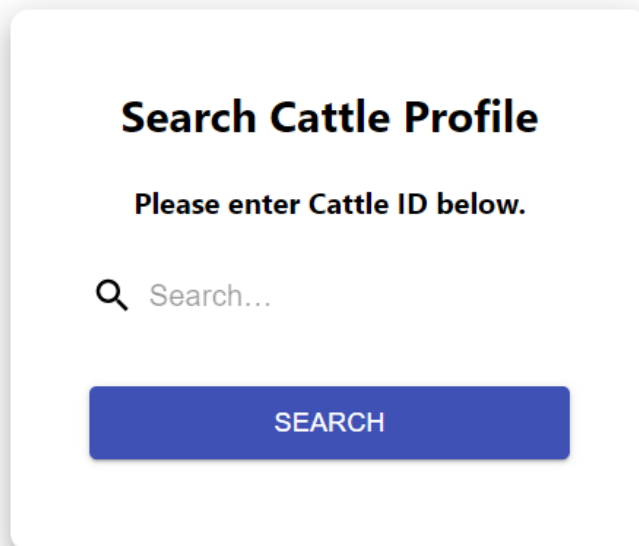

Farmer's Portal

CREATE CATTLE PROFILE

SEARCH CATTLE PROFILE

7. When the Search Cattle Profile button is clicked, it takes the user to the search page where they can search for a cattle by its cattleID. Select the Search button once the ID is entered. (All ADMIN users have this option).

Search Cattle Profile

Please enter Cattle ID below.

🔍 Search...

SEARCH

8. When search is made, the database retrieves and connects the profile to its cattleID. And displayed the requested cattle.

9. Users can click the displayed cattle profile. And will be taken to a form containing previously added information from the former stage.

A web form titled "Cattle ID: 40453". It contains a scrollable box with the following information:

Birth Info
Birth Date: May 2, 2020
Gender: Female
Underlying Health Issues: None
Weight: 80kg
Location: Spanish Lookout
Farmer: Bob Ross
Breed: Hereford
Rearing Type: Free roaming
Antibiotics Used: None
Reproduction Status: None
DNA Type: AB

To the right of the scrollable box are two buttons: a blue "ADD" button and a green "EXIT →" button.

10. Exit sends the user back to the previously opened page. Add carries the user to a form customized to the data needed from their stage. (Cattle Birth Info→Slaughter Info→Packaging Info)

Create New Slaughter Info

GENERATE QR CODE

CANCEL

SAVE

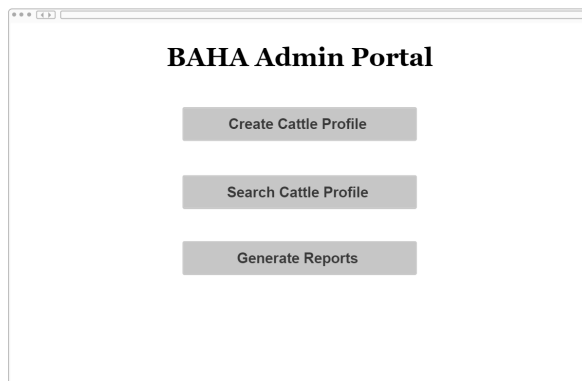

11. Step 5 is repeated when Cancel or Save is selected.

12. For *Packaging Managers*, if Generate QR Code is selected, they will be redirected to a page containing the uniquely generated QR (from the system). The data for the QR code will be pulled and connected to the QR code.

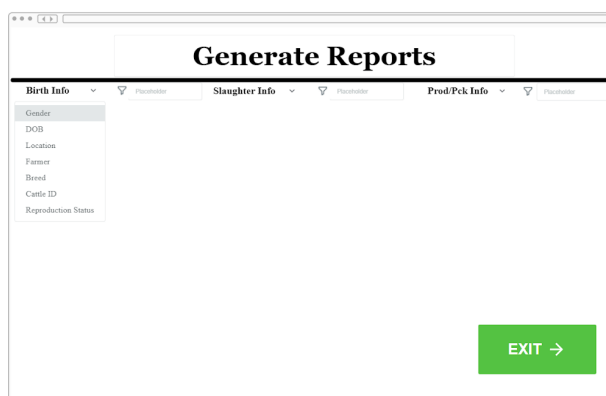

13. Exit takes the Packaging manager to a previously opened page.

14. Only BAHA ADMINS have the option to generate reports. Their Portal will have the option for them to select a Generate Report Button.

15. They can generate reports based on specific data types, through filtering. (Eg: through cattleID)
